SQlab grip safety

- ① **Plane shapes** on the front and underside match the edge shape of bent fingers. This provides increased **grip safety** compared with conventional, round grips.
- ② **Comfort zone** with soft material.
- ③ More comfort for the **ulnar nerve**/outside of your hand thanks to an enlarged and slightly lower **relief wing**.
- ④ **Wavy shape** that matches the natural shape of your hand.
- ⑤ **Safety zone** with **pyramid texture** – for a safe hold at the handlebar.
- ⑥ Wavy cut-out under the relief wing guarantees a **safe hold** – while changing grip positions off-road.
- ⑦ **Lock function** for easy mounting and a safe hold on the handlebar.
