The online seller from Bocholt thoroughly overhauled its aluminum bestseller Pro SL before this season. The frame, available in nine sizes, now has a sharp-edged top tube that tapers strongly towards the rear. The frame's new form and cables running internally significantly enhance the new model. In combination with the light, well-flexing fork, the frameset is a serious alternative to low-end carbon frames. The complete 105 group is joined by Aksium wheels mounted with 25 millimeter tires from Mavic. Parts from Ritchey round off the package; the thick handlebars, which are slightly angled towards the rider, are very comfortable to grab on to. Thanks to a pure comfort geometry, the seating position is relaxed. The long wheelbase and a rigid frame help to give the bike good straight-ahead tracking.

NO COMPROMISES

With its hydroformed tubing and accurate welds, the frame of the Pro-SL shows good workmanship
