

respiro

START COOL STAY COOL

Start cool stay cool. On hot days, if your bike is standing in the sun or during a long ride, a saddle can heat up. If the temperature rises above the rider's skin temperature the saddle creates an unpleasant, sweaty feeling.

SITTING POSITION

ANATOMICALLY DESIGNED

Anatomically correct for men
The ergonomic design of the respiro men's saddles reduces pressure on nerves, arteries and on the prostate. It allows optimal blood flow and reduces feelings of numbness.

Anatomically correct for women
Respiro women's saddles reduce pressure in the central genital area, where sensitive areas of tissue bear part of your weight, thus providing noticeably more comfort.

FEATURES

COOL COVER

Thanks to a special sunlight reflecting material, the temperature of our extraordinary saddle cover lies up to 25°C below the one of standard black saddles.

Seta black comes with a Microtex cover instead of a Cool Cover

VENTILATION CHANNEL

Relieves pressure in the perineal area and reduces unpleasant sweating.

Seta black comes without ventilation channel

ROYALGEL™

Royalgel™ guarantees a high level of comfort, because it reduces peak pressure by up to 40% thanks to its three-dimensional gel structure.

Seta black comes with a foam matrix instead of gel
