

### SQlab *active* concept

The biomechanically optimal lateral movement of the active series increases comfort and is kind to the intervertebral discs. Adjustable for individual comfort.

### SQlab Stepsaddle

more freedom – less pressure

The SQlab stepsaddles come in different widths. Different saddles for men and women are no longer required. For women, the lower saddle nose relieves the upper pubic bone; for men, there is more freedom for the perineal area/genitals.

### SQlab saddle width system

Because a saddle must fit like a pair of shoes!
